pieces/set

MADE IN
JAPAN

The specially shaped ball point resists slipping during oblique tightening work

The ball point is specially designed to contact more surface area of the bolt hole, thus resisting slipping even during work at right angles or approx 20°.

Effective in use at oblique angles

Suitable for loosening and tightening screws in cramped or recessed spaces.

Excellent wear resistance and torsion strength

These tools are made of special alloy steel and have undergone optimum heat treatment, thus ensuring excellent durability.

Foldable holder

The foldable holder keeps the tool set neatly and compactly organized, and can be opened to select tools.
